

Ooonana OS

Ooonana OS 0.8.18 field guide

What it is

Ooonana OS is a scratch-built Linux project with its own rootfs, boot flow, installer experiments, WSL export, and custom ooonana package manager. Debian or Ubuntu are host build tools only. Alpine APKs are imported into Ooonana .pkg repos; the target OS installs Ooonana packages, not live Alpine APKs.

Editions

minimal: BusyBox-style rootfs, kernel, GRUB disk, installer ISO, WSL rootfs, command line AI.
full-i3: minimal plus i3, Xorg, Spotlight-style launcher, movable GTK apps, wallpaper, GUI installer, AI desktop app, and full WSL rootfs.

Package install

```
oonana update
oonana search nano
oonana show nano
oonana get nano --dry-run
oonana get nano
oonana files nano
oonana verify nano
oonana upgrade
oonana remove nano
oonana purge nano
oonana fix nano --reinstall
```

Cloud repo

Default cloud path is the GitLab Pages direct repository:
<https://oonana.gitlab.io/oonana-repo>
Run ooonana update && ooonana upgrade. Metadata syncs first; package archives download only when install or upgrade needs them.
GitHub Releases remains a backup tarball repository path.

Installer

Full-i3 live ISO boots i3 by default. The installer wizard has disk picker, partition controls, user/password, hostname, theme and repo pickers, progress log, failure shell, and reboot prompt.

First boot

oonana setup --first-boot --gui can create user, set password, write network config, choose theme, add cloud repo, and mark setup complete.

WSL

Import full-i3 with `scripts/install-wsl-distro.sh --distro Ooonana --tarball /var/tmp/oonana-os/release/oonana-full-i3-wsl-rootfs.tar.gz --force`
Launch with: `wsl.exe -d Ooonana -- /usr/bin/start-oonana-i3`
WSL GUI needs WSLg or an X server with `DISPLAY` set.
Update an imported distro with: `oonana update && ooonana upgrade`

AI

Ooonana AI runs as `oonana ai ...` or `oonana-ai`. It supports cloud providers, offline Intel OpenVINO, ask/chat, tools, tasks, audit, history, status, and a native GUI. The full-i3 desktop includes a ChatGPT-style AI workspace, Settings, Wi-Fi, Bluetooth, Packages, and Spotlight-style application launcher.

Desktop and hardware

The i3 desktop uses black/orange Ooonana styling, explicit close/minimize/fullscreen controls, icon-first polybar, audio, brightness, power, Wi-Fi, Bluetooth, and wallpaper modes. Default fit mode preserves aspect ratio with black side bars. Wi-Fi supports personal and enterprise profiles. NetworkManager, BlueZ, D-Bus, Intel Wi-Fi/Bluetooth firmware, Chromium, Python 3, sudo, su, and doas are included in full-i3.

Build proof markers

`OOONANA_CLI_OK`
`OOONANA_BOOT_OK`
`OOONANA_INSTALL_OK`
`OOONANA_FULL_I3_OK`

More detail lives in `README.md`, `docs/oonana-ai.md`, and `docs/jarvis-agi-research.md`.
